

Toner Recycling Program

The Environment is Our Business.

*"The typical used toner cartridge is composed of 40 percent plastic, 40 percent metal and smaller percentages of rubber, paper, foam and toner. The plastic is made of engineering-grade polymers and takes **at least 1,000 years to decompose**. However, approximately 97 percent of these combined components can be recycled or reused."*

Alphasoft Ltd. is joining the environmental protection effort by spearheading an HP toner cartridge recycling program. At this time, all of these solid waste items are joining the ever-expanding landfill, and this number will only grow as the Cayman Islands continue developing. We invite you to participate in this vitally important drive by committing to a partnership that will significantly benefit our companies and these islands.

The process is very simple and will be at no cost to your company. You do not have to be an Alphasoft client to participate, and participants will be listed in future press releases as supporting this initiative. Please note that at present only HP Laser Toner cartridges qualify for the program.

1. Instead of throwing away your used cartridges, please store them (without their original boxes—these are not needed) ready for recycling
2. Email recycling@alphasoft.com.ky when your store of cartridges is at capacity and they are ready to be picked up
3. We will fill our container here and this will then be exported to Miami
4. Our freight forwarder in Miami will take possession of the container, and HP USA will collect the cartridges for recycling

This is a great opportunity for your business to join the recycling movement at no cost and with very little inconvenience. It is a 100% non-profit venture. Let's reduce the amount of waste products accumulating in the Cayman Islands instead of adding to them, and do our part to assist in preserving the environment.

We look forward to having you on board,

The Staff and Management of Alphasoft Ltd.
